Comandos Git

Crear repositorio

Git init

Agregar archivos al index

Git add <filename>

Git add .

Consolidar o confirmar

Git commit -m "comment"

Agregar remoto

Git remote add origin <server>

Enviar

Git push -u origin <branchName>

Agregar remoto

Git remote add origin <server>

Enviar

Git push -u origin <branchName>

Local

Git clone /path/to/repository

Remoto

Git clone <server>

Crear

Git checkout -b <branchName>

Cambiar

Git checkout <branchName>

Eliminar

Git branch -d <branchName>

Enviar

Git push origin <branchName>

Actualizar

Git pull

Fusionar

Git merge <branchName>

Conflictos

Git add <filename>

Comparar

Git diff <source_brach> <target_branch>

Estado

Git status

Log

Git log

Descartar

Git checkout – <filename>

Git fetch origin

Git reset –hard origin/master
